**Type 3222/2780 Pneumatic Control Valve**  
**Single-seated Type 3222 Globe Valve**

**Application**

Globe valves for heating, ventilation and air-conditioning systems

**DN 15 to 50, G ½ to 1 · PN 25**

Version **up to 150 °C** (for water, oil and liquids)

Version **up to 200 °C** (for water above 150 °C and steam)

**Special features**

- Single-seated globe valves partly available with balanced plugs
- Single-seated globe valves optionally available with male thread connection and welding ends, threaded ends, flanges or with female thread connection as well as with flanged valve body
- Force-locking connection between valve and actuator

<sup>1)</sup> Electric actuators with fail-safe action

<sup>2)</sup> Pneumatic actuator suitable for integrated positioner attachment

**Register number**

The valves mounted on Type 5825, TROVIS 5725-3, TROVIS 5725-7 and TROVIS 5725-8 Actuators for fail-safe action "actuator stem extends" are tested by the German Technical Inspectorate (TÜV) according to DIN EN 14597. The register number is available on request.

**Also available:**

Type 3222 N Valve suitable for local heat supply and large heating networks. Refer to Data Sheet ▶ T 5867.

### Principle of operation (Fig. 5)

The medium flows through the single-seated globe valve in the direction indicated by the arrow. The position of the plug determines the flow rate across the area released between plug (3) and valve seat (2). The valve is opened by the valve spring (5) when the actuator stem retracts. A special version is required for water with temperatures above 150 °C and for steam. The plug is moved by changing the control signal applied to the actuator.

The valve (1) and actuator (10) have a force-locking connection. An intermediate insulating piece is available for insulated pipes.

### Fail-safe position

For globe valves mounted to an actuator with fail-safe action, the control valve has two different positions which become effective upon power supply failure:

Actuator stem extends

- The globe valve closes upon power supply failure

Actuator stem retracts

- The globe valve opens upon power supply failure

### Electric actuators

The electric actuators can be controlled either using a three-stepping point signal or, in the version with positioner, with signals adjustable in the range from 0/4 to 20 mA or from 0/2 to 10 V. Various electrical accessories can be optionally installed.

Type 5825 Actuator is able to perform a fail-safe action. Refer to Table 4.

Refer to the data sheets for more details on the electric actuators:

▶ **T 5857:** Type 5857 Electric Actuator

▶ **T 5824:** Types 5824 and 5825 Electric Actuators

### Electric actuators with process controllers

The actuators consist of a digital controller which is integrated into the electric actuator housing. The TROVIS 5757-3, TROVIS 5724-3 and TROVIS 5725-3 are suitable for domestic hot water heating, whereas TROVIS 5757-7 and TROVIS 5725-7 are suited for heating and cooling applications. The TROVIS 5724-8 and TROVIS 5725-8 have two PID control modules and are ready-wired for heating and cooling applications.

TROVIS 5725-3, TROVIS 5725-7 and TROVIS 5725-8 Actuators are able to perform a fail-safe action. Refer to Table 4.

Refer to the data sheets for more details on the electric actuators with process controllers:

▶ **T 5757:** TROVIS 5757-3 Electric Actuator with Process Controller for domestic hot water heating

▶ **T 5757-7:** TROVIS 5757-7 Electric Actuator with Process Controller for heating and cooling applications

▶ **T 5724:** TROVIS 5724-3 and TROVIS 5725-3 Electric Actuators with Process Controllers for domestic hot water heating

▶ **T 5725-7:** TROVIS 5725-7 Electric Actuator with Process Controller for heating and cooling applications

▶ **T 5724-8:** TROVIS 5724-8 and TROVIS 5725-8 Electric Actuator with Process Controller for heating and cooling applications

### Pneumatic actuators

The Type 2780-1 Pneumatic Actuator uses a control signal from 0.4 to 1 bar and Type 2780-2 uses a control signal from 0.4 to 2 bar which is applied to the loading pressure connection. The pneumatic actuators require a supply pressure of at least 0.2 bar above the maximum bench range. The actuators are available for fail-safe action "actuator stem extends (FA)" or "actuator stem retracts (FE)".

The Type 2780-2 Pneumatic Actuator is suitable for integral positioner attachment.

Refer to the data sheets for more details on the pneumatic actuators:

▶ **T 5840:** Types 2780-1 and 2780-2 Pneumatic Actuators

### Installation of the control valve

- Version for water, oil and other liquids: the valve can be mounted in any desired position, however, the actuator must not be suspended downwards.
- Version for water above 150 °C and steam: the valve must be installed with the valve in the upright position.

If the control valve is to be insulated, the actuator and the coupling nut must not be insulated as well. Additionally, it must be ensured that the temperature does not exceed the maximum permissible ambient temperature. If necessary, an intermediate insulating piece must be used. Do not insulate it over 25 mm.
